

Dr.Web LiveCD | Windows 8 - Windows 7

Tweet

Dr.Web LiveCD est un disque de secours antivirus qui permet de nettoyer un système infecté.

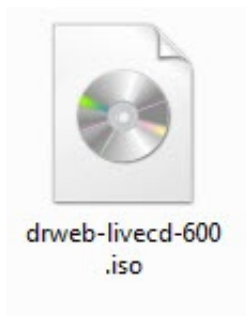

L'analyse se fait donc sur un **Windows** non actif, ce qui permet une neutralisation plus efficace des éléments infectés trouvés, notamment sur certaines infections coriaces.

Selon le type des infections à traiter, l'analyse peut être extrêmement longue (48 h parfois).

Il permet aussi de pouvoir sauvegarder ses données personnelles si **Windows** ne démarre plus.

Télécharger **Dr.Web LiveCD** (174,53 Mo) et l'enregistrer dans le dossier **Téléchargements** (depuis un autre PC fonctionnel si le système ne démarre plus)

Graver l'image **drweb-livecd-600-iso** sur un CD avec **ImgBurn** par exemple

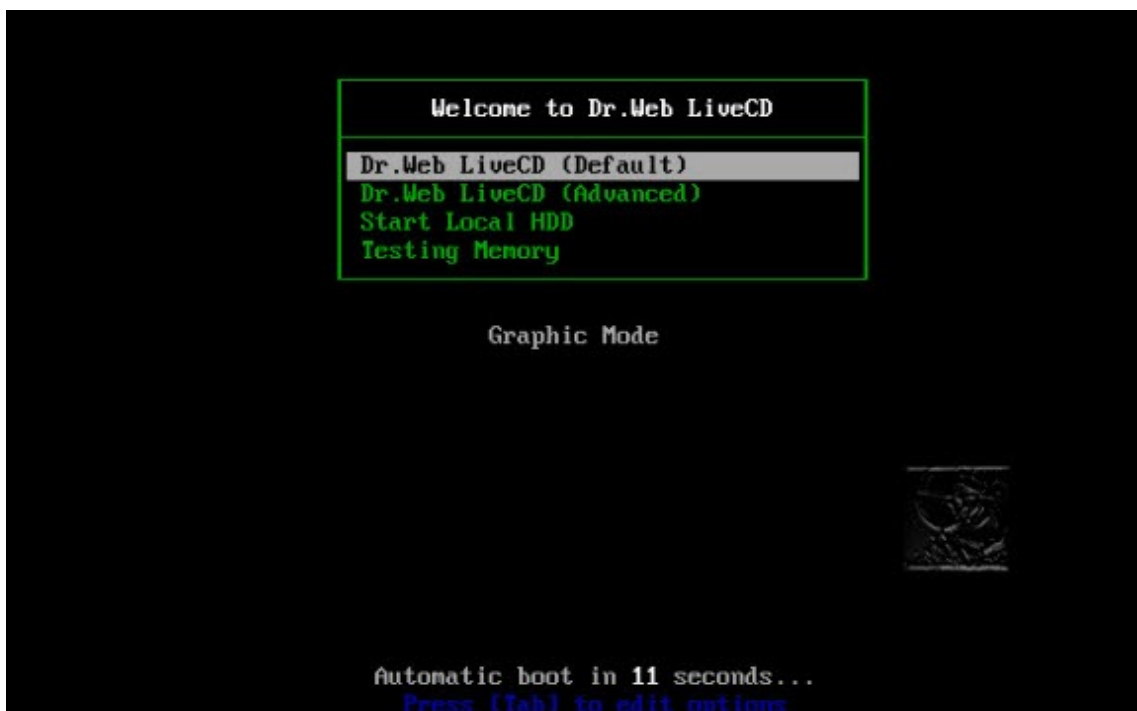

ImgBurn, logiciel de gravure de fichier image

Démarrer le PC à désinfecter, sur le lecteur

Démarrer l'ordinateur sur le lecteur CD/DVD

L'écran d'accueil de **Dr.Web LiveCD** s'affiche.

Sélectionner **Dr.Web LiveCD (Default)** et valider

L'environnement du **LiveCD** se prépare puis charge le système.

Patience le temps de la progression.

Le Bureau du **Dr.Web** s'affiche.

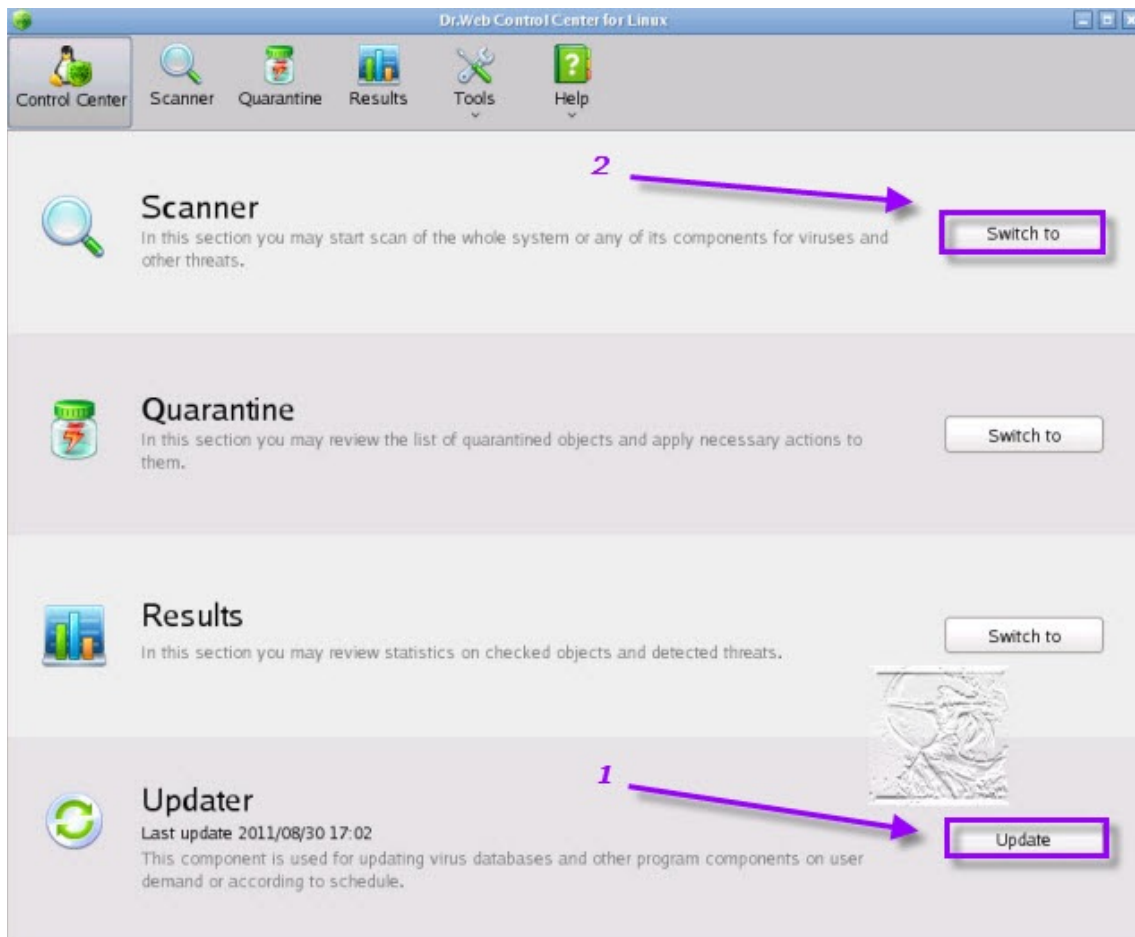

Si l'option **Dr.Web LiveCD (Default)** a été sélectionnée, **Dr.Web Control Center** s'ouvre directement.

Si **Dr.Web Control Center** ne s'est pas directement affiché, cliquer sur l'icône **Dr.Web Control Center** pour l'ouvrir.

1 – Si une connexion internet est active, cliquer sur **Update** dans **Updater** et attendre que la mise à jour de la base de données virales se termine.

2 – Cliquer sur **Switch to** dans **Scanner**

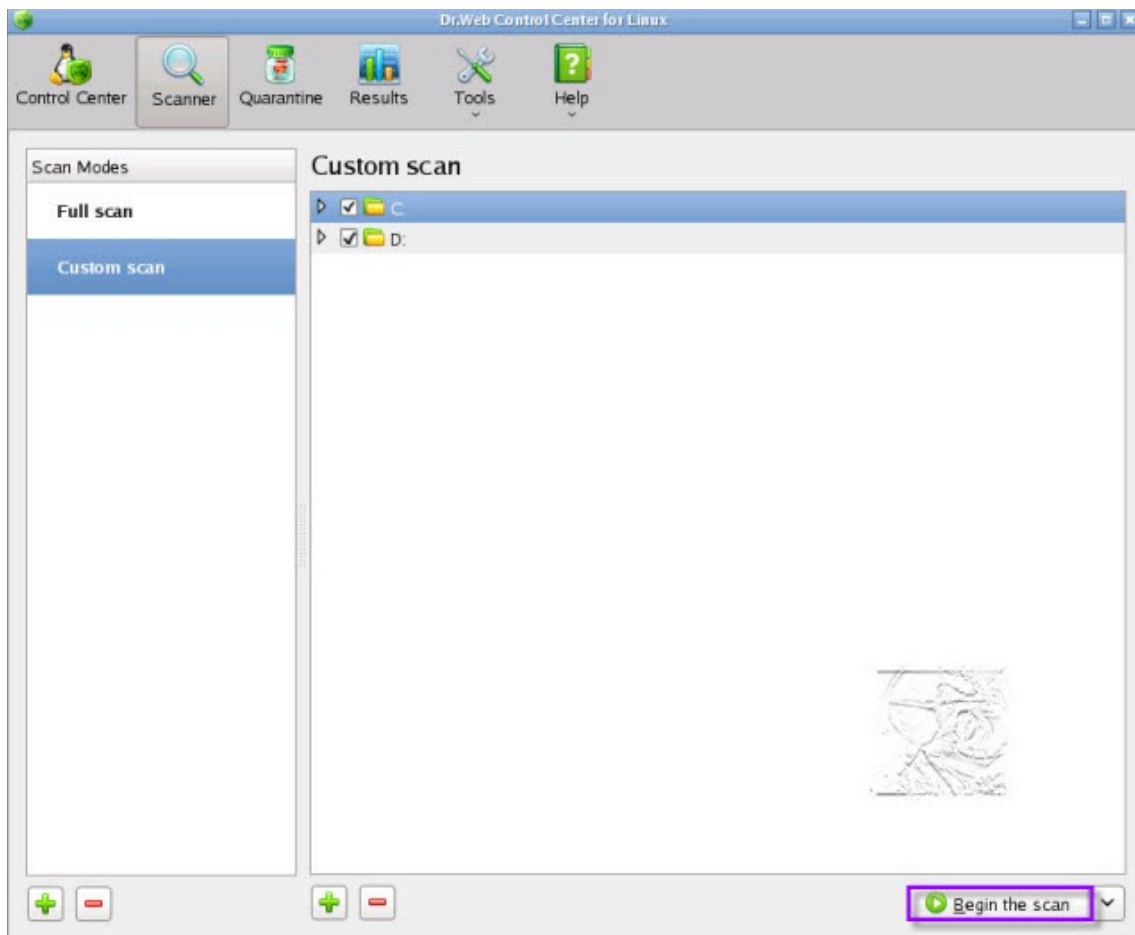

Deux modes d'analyse sont proposés pour sélectionner les lecteurs à analyser :

- **Full scan** pour une analyse complète du système
- **Custom scan** pour sélectionner les lecteurs à analyser

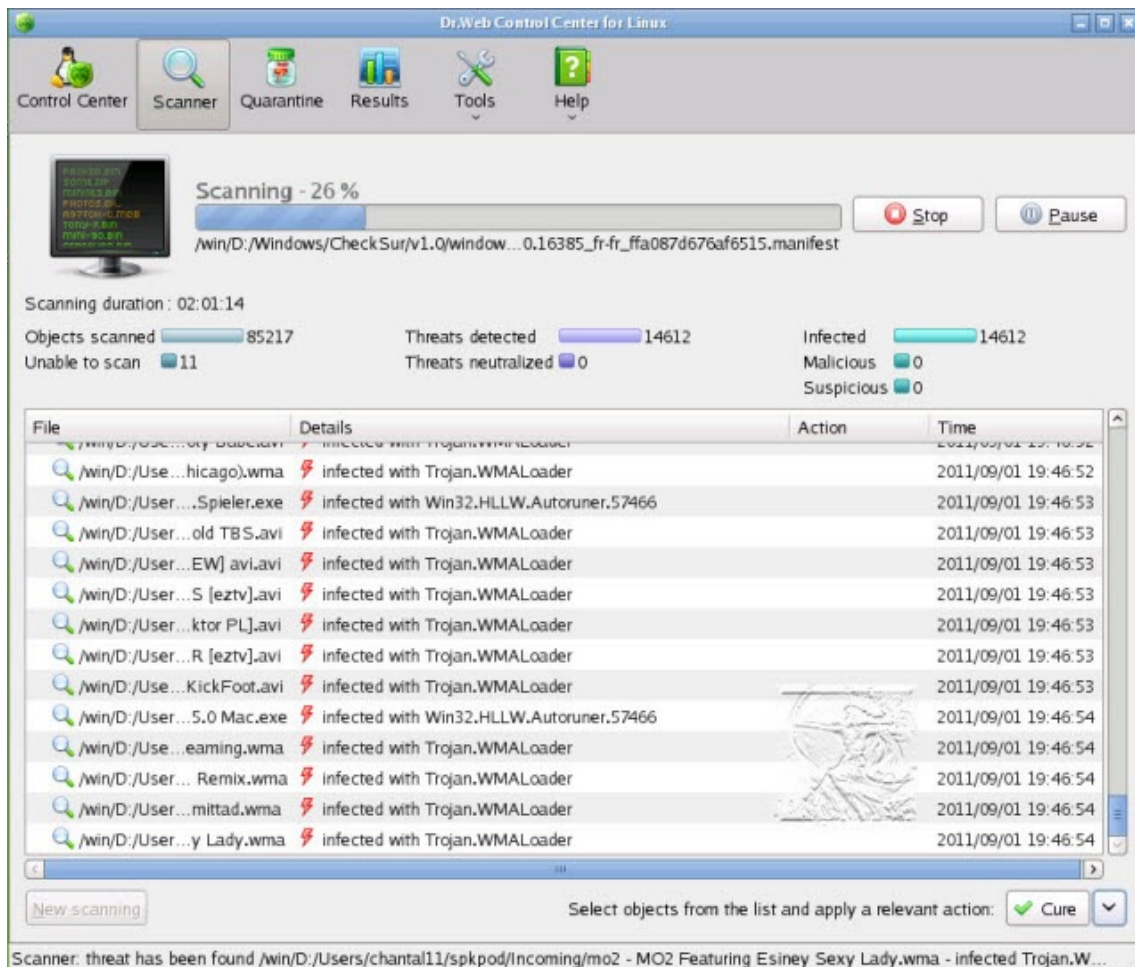

Note importante : Sous **Windows 7** avec la **partition primaire installée**, **C** correspond à la partition primaire et **D** correspond à la partition où est installé **Windows 7**.

Cliquer ensuite sur **Begin the scan** pour lancer l'analyse

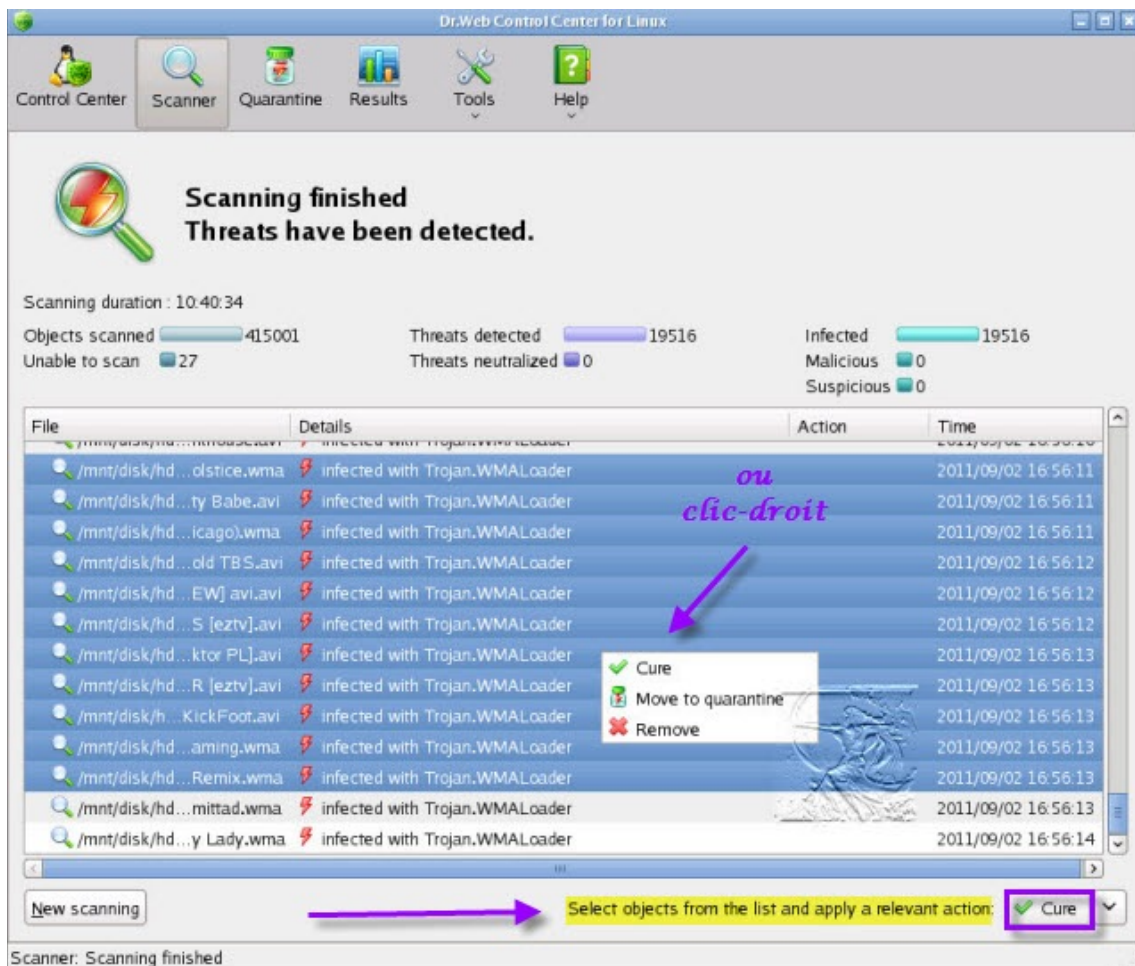

L'analyse démarre.

Patienter, cela peut prendre plusieurs heures selon la capacité à analyser.

Dr.Web liste les éléments infectieux trouvés.

Les éléments sont à sélectionner en cliquant sur la ligne, puis cliquer sur Cure (paramètre par défaut) ou faire un **clic-droit** pour sélectionner **Cure**, **Move to quarantaine** ou **Remove**

Pour récupérer le rapport, cliquer sur **Export** et enregistrer-le dans la partition qui supporte le système d'exploitation **Windows**.

Quitter l'environnement du **LiveCD** en cliquant sur **Shutdown**, puis **Eject**.

Redémarrer le système **Windows** normalement.

Exemple de rapport :
